Professional Summary

MS Applied Data Intelligence student at San Jose State University with **over one year** of data engineering experience at **Accenture**. Experienced in **Python, SQL**, **data modeling and data quality**, with pipeline projects using **Airflow, Snowflake**, **AWS S3 and dbt**. Seeking a Summer 2027 Data Engineer internship focused on product analytics.

Education

San Jose State University — Expected Graduation: Dec 2027
Master of Science in Applied Data Intelligence (MSADI) — GPA: 4.0/4.0

Institute of Technical Education and Research (ITER) — May 2018
Bachelor of Technology in Computer Science — GPA: 3.62/4.0

Skills

Languages and Libraries: Python, SQL, pandas, NumPy
Engineering: Apache Spark, Apache Airflow, dbt, ETL/ELT, Dimensional Modeling, REST APIs; LLM APIs, Retrieval-Augmented Generation (RAG), LangChain, LangGraph
Platforms and Tools: Snowflake, AWS S3, AWS Glue, Docker, Git, GitHub Actions
Data Quality and Analytics: dbt Tests, Data Validation, Tableau, Preset, Plotly

Work Experience

Accenture | India

Senior Analyst — *Dec 2022 - Feb 2024*

- Built Apache Spark pipelines processing **2 TB+ daily** and maintained **data models** for business reporting.
- Automated **dbt tests** to detect **data quality** issues and maintain reliable core reporting datasets.
- Built Tableau dashboards for **40+ stakeholders** that **generated insights** into billing delays and errors, helping finance and operations prioritize records for resolution.
- Migrated legacy ETL to AWS Glue: **30% fewer failures** and reduced billing-data delivery time from **12 to 3 hours**.

SAP Consultant — *Sep 2021 - Dec 2022*

- Built pricing and billing configurations supporting the order-to-cash cycle for a French energy company.

Infosys | India

SAP Consultant — *Sep 2018 - Sep 2021*

- Configured the order-to-cash cycle for a UK-based beverage company.

Projects

Movie Analytics Pipeline | Repository | Dashboard

- Orchestrated a **10-task Airflow pipeline** loading six IMDb datasets and three TMDB sources via AWS S3 into Snowflake.
- Planned **data warehouse layers** in Snowflake (RAW, CURATED, ANALYTICS) with **fact and dimension models**.
- Built **SQL/dbt metrics** for **913K catalog titles**. Generated an insight that only **44.5% had ratings**, so comparisons covered only part of the catalog.
- Used **SQL joins, aggregations and window functions** to compare genre ratings and rank directors and actors by average ratings of qualifying films.
- Ran Airflow/dbt in **Docker** with **bind mounts** for code, dbt models and downloaded CSVs. Protected Snowflake tables with **transactional refreshes** on empty or failed loads.
- Automated **dbt tests**, Python/browser checks and **GitHub Actions** publication after successful runs.

EV Infrastructure and Adoption | Repository | Dashboard

- Built city, state and state-year **fact tables** linked to a **shared state dimension** using **SQL/dbt dimensional modeling**. Tested unique keys and relationships.
- Aggregated NREL (charging station data) by state before joining DOE/AFDC (EV registrations) and Census population on **shared state codes**, avoiding duplicate counts. Joined annual EV/station records by state and year.
- Compared **EVs per station, ports per EV** and stations per 100K residents in SQL/dbt. Identified **142 registered EVs per open public station in Oklahoma**, nearly **double the U.S. ratio of 73**, in the dashboard snapshot.

Weather Forecasting and Evaluation | Repository | Dashboard

- Downloaded San Jose and Los Angeles weather data from the **Open-Meteo API**. Linked **three Airflow workflows** for ingestion, **seven-day Snowflake ML forecasts** and **dbt tests**.
- Evaluated **mean absolute forecast error** by city and days ahead in SQL/dbt; tracked revisions with **snapshots**.
