Work Authorization: U.S. EAD (no sponsorship required)

Professional Summary

MS Applied Data Intelligence student at San Jose State University with 1.5 years of Data Engineering experience at Accenture focused on data modeling. Built Python and SQL based ETL pipeline projects using Airflow, Snowflake, AWS S3, and dbt. Seeking a Summer 2027 Data Engineering internship.

Education

San Jose State University — Expected Graduation: Dec 2027
Master of Science in Applied Data Intelligence (MSADI) — GPA: 4.0/4.0

Institute of Technical Education and Research (ITER) — May 2018
Bachelor of Technology in Computer Science — GPA: 3.62/4.0

Skills

Languages: Python, SQL
Python Libraries: NumPy, pandas
Data Engineering: Apache Spark, Apache Airflow, dbt, ETL/ELT, Data Modeling, Dimensional Modeling, REST APIs
Platforms and Tools: Snowflake, AWS S3, AWS Glue, Docker, Git, GitHub Actions
Data Quality and Visualization: dbt Tests, Tableau, Preset, Plotly, Matplotlib, Seaborn
AI: LLM APIs, Retrieval-Augmented Generation (RAG), LangChain, LangGraph

Work Experience

Accenture | India

Senior Analyst — *Dec 2022 - Feb 2024*

- Built and managed Apache Spark pipelines processing **2 TB+ of data daily**, and maintained data models for business analytics and reporting.
- Automated dbt tests to identify data quality issues and maintain reliable core datasets.
- Designed Tableau dashboards for **40+ stakeholders**, translating business requirements into reporting views.
- Migrated legacy ETL jobs to AWS Glue, reducing pipeline failures by **30%**.

SAP Consultant — *Sep 2021 - Dec 2022*

- Built pricing and billing configurations to support the order-to-cash cycle for a French energy company.

Infosys | India

SAP Consultant — *Sep 2018 - Sep 2021*

- Configured the order-to-cash cycle for a UK-based beverage company.

Projects

Movie analytics pipeline | Repository | Dashboard

Helps users compare movie ratings, genre trends, and current recommendations.

- Orchestrated a **10-task Airflow pipeline** integrating six IMDb datasets and three TMDB data sources into Snowflake through AWS S3.
- Ran the pipeline in Docker and used transactional table refreshes to **preserve existing data** when loads were empty or failed.
- Added dbt and Python/browser tests; automated validation and dashboard publication with GitHub Actions after **successful pipeline runs**.

EV infrastructure and adoption | Repository | Dashboard

Shows how charging station coverage compares with EV adoption and population.

- Designed dbt fact tables at city, state, and state-year levels, with shared state identifiers and tests for **unique keys and valid relationships**.
- Aggregated NREL station records before joining DOE/AFDC registrations and Census population by state; kept city metrics at city level.
- Built metrics for EVs per charging station, ports per EV, stations per 100,000 residents, and yearly EV growth to identify **coverage gaps**.

Weather forecasting and evaluation | Repository | Dashboard

Shows upcoming temperatures and how forecasts compare with observed weather.

- Linked three Airflow workflows for ingestion, **seven-day forecasts** using Snowflake ML, and dbt tests.
- Measured **mean absolute error** against actual temperatures by city and days ahead; tracked forecast revisions with snapshots.
